Tyson Foods chooses FiberTite® for complex roofing needs

When Tyson Foods requires an effective solution to a complex roofing problem, it chooses a FiberTite® Roofing System by Seaman Corporation. Tyson roofs must have the ability to withstand the effects of oil, grease, ponding water, fatty acids and multiple penetrations—and the foot traffic necessary to maintain the machinery associated with these penetrations.

So when it comes time for Tyson to put a new roof on one of their plants, they already know that a FiberTite Roofing System will be the most cost-effective, long-lasting option available. They know this because they have already installed almost 2 million square feet of FiberTite on other Tyson rooftops.

Only FiberTite Roofing Systems by Seaman Corporation are engineered using DuPont® Dacron polyester fibers and DuPont Elvaloy KEE® coating. It is these integrated properties that keep FiberTite membranes flexible and durable enough to withstand even the most complicated situations. This formula, combined with Seaman's 50-year history of engineered fabric and coating technology, simply makes FiberTite the best roofing membranes there are.

After more than 20 years on rooftops, FiberTite can point to a history of superior achievement that no other roofing product can. A history of cost-effective, long-lasting proof on even the most complex roofs. Tyson Foods knows this. Let us prove it to you.
